42528
Digital thermometer for internal and external

DESCRIPTION

The thermometer has a 300cm long cable. The device displays the current temperature as well as low and high. The display also shows the temperature outside and inside. The thermometer is water resistant. To use the thermometer outdoors simply put the sensor cable outside and the device inside. This feature can also be used to monitor the difference in temperature of two rooms or to monitor how cold a refrigerator is compared to the room the refrigerator is in.
